**National Radio Astronomy Observatory
Green Bank, West Virginia**

This unique instrument using three 85-foot radio telescopes is called an interferometer. By moving the two 85-foot telescopes in the foreground to different observing stations along a 5000 foot roadway with respect to a fixed, third 85-foot telescope, it is possible to simulate an antenna several thousands of feet in diameter.

"TRAVELERS' REPOSE"

Made famous in novels of
Hergesheimer, Bierce, and
others. This is the country of
"Tolable David." On the neighbor-
ing hills are the Confederate
trenches that guarded
their camp in 1861, near which
several battles were fought.
